

MaxSpiral by Cristini
Spiral Dryer Fabric Family
Maximum Stability, Maximum Life

MaxDry ST™

MaxDry ST™ is a multi-link dryer fabric, high wear resistant and stronger fabrics due to yarns diameter used, designed to maximize the evaporation rate.

The special modular construction allows for fabric repair in case of damages, provides very high seam strength and allows for very easy installation. These high level mechanical characteristics helps achieve longer life and contributes to a lower usage cost per ton of paper produced.

The excellent ratio porosity/contact area ensures high evaporation and good heat transfer.

The 100% monofilaments pattern allows for easy cleaning. MaxDry ST™ fabrics stay cleaner longer and are more easily cleaned to maintain a uniform permeability for an efficient drying.

MaxDry ST™ is designed for positions where fabric strength & drying performances are critical; particularly dedicated to machines producing brown grades.

MaxDry™ is offered in 4 variations:

MaxDry ST™: constructed with standard PET yarns for applicable to most applications

MaxDry CL™: constructed with anti-contamination yarns for positions prone to filling from Pitch or Stickies

MaxDry HT™: constructed with modified PET which allows for higher resistance in high heat positions

MaxDry XT™: constructed with extra hydrolysis resistant yarns for extreme heat and humidity positions
