

MaxSpiral by Cristini
Spiral Dryer Fabric Family
Maximum Stability, Maximum Life

MaxDry HT™ and MaxFlat HT™

MaxDry HT™ and MaxFlat HT™ is a multi-link dryer fabric, with a good wear resistance, designed to run on high temperature dryer groups. This fabric is ideal for positions requiring some addition resistance to heat compared to standard PET.

The modified PET monofilaments guarantee long life in a high temperature environment a content dryer groups thanks to longer resistance to extreme heat.

The special modular construction allows for fabric repair in case of damage, and provides very high seam strength.

The high permeability allows high drying rates, excellent ventilation and easy cleaning.

MaxDry HT and MaxFlat HT™ is designed for high temperature dryer groups, where higher resistance to heat is required.
