

DuraTech™

DuraTech™ is a dryer fabric engineered to improve the operating life and the drying performances. **DuraTech™** is a well-balanced economical issue to solve stability and mechanical problems that affect packaging paper machines.

The very robust flat MD yarns used for its construction guarantees excellent abrasion resistance and superior mechanical stability, even on tougher mechanical positions.

This special pattern utilizing special monofilaments offers a high contact area, for a superior heat transfer; and increases thermal exchange and evaporation rate due to its permeability, at high porosity value, maximizing evaporation.

The all monofilament design reduces contamination build up and allows easy on machine cleaning.

DuraTech™ is designed for positions where surface abrasion and drying performances are critical; dedicated to machines producing packaging grades.

Available on request: **MicroGrip™** surface with high adherence polymer and **DuraTrac™** high adherence edges coating for optimal fabric tracking.

Available on request: PEEK spiral seam.
