

MaxSpiral by Cristini
Spiral Dryer Fabric Family
Maximum Stability, Maximum Life

MaxDry XT™

MaxDry XT™ is a multi-link dryer fabric, with a good wear resistance, designed to run on high temperature and high moisture content dryer groups.

The special PPS monofilaments guarantees long life in a high temperature environment and high humidity content dryer groups thanks to maximum hydrolysis resistance and good contamination resistance.

The special modular construction allows the fabric repair in case of damage, and provides very high seam strength.

The high permeability allows high drying rates, excellent ventilation and easy cleaning.

MaxDry XT™ is designed for high temperature, high moisture dryer groups, where hydrolysis is a problem.

MaxDry™ is offered in 4 variations:

MaxDry ST™: constructed with standard PET yarns for applicable to most applications

MaxDry CL™: constructed with anti-contamination yarns for positions prone to filling from Pitch or Stickies

MaxDry HT™: constructed with modified PET which allows for higher resistance in high heat positions

MaxDry XT™: constructed with extra hydrolysis resistant yarns for extreme heat and humidity positions
